EXAMINERS AMENDMENT

1. An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to the applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this amendment was given in telephone interview with Peter Balnave on July 30, 2009.
3. The claims have been amended as follows:
 - a. Claim 21, line 16, the words, "said outputted data" have been replaced with -- outputted data--.

Allowable Subject Matter

4. Claims 2, 8 - 27 are allowable over the prior art of record.
5. Following is an Examiner's statement of reasons for indicating allowable subject matter.
6. While Blaner ("An embedded PowerPC SOC for test and measurement applications") teaches an SOC comprising a master central processing unit (CPU) that produces a first set of signals and a second set of signals for verifying said integrated circuit logic in response to running a verification case (page 208, section E Verification Testbench and section F Simulation Speedup Mode); an SOC interface that receives said second set of signals (figure 2); a first external bus interface unit (EBIU) that is slaved to said master CPU and receives said first set of signals (figure 2); a verification test bench that is external to said SOC, said verification test bench comprising: a verification interface model connected to said SOC interface (figure 2 and page 208, section E Verification Testbench); wherein said first set of signals received by said second EBIU a

testbench device is inputted to said verification interface model and said verification interface model outputs data for said verification case to said SOC interface; wherein said verification case checks for correctness of said outputted data from said verification interface model to said SOC interface ~~by said second set of signals~~ and records a verification case status; and Devins ("SOC Verification Software - Test Operating System", *figure 4 and page 188, left-side column*) teaches SOC comprising a master central processing unit (CPU) that produces a first set of signals and a second set of signals for verifying said integrated circuit logic in response to running a verification case (*figure 4*); an SOC interface that receives said second set of signals (*figure 4*); a verification test bench that is external to said SOC, said verification test bench comprising: a verification interface model connected to said SOC interface (*figure 4*); wherein said first set of signals received by ~~said second EBIU~~ a testbench device is inputted to said verification interface model and said verification interface model outputs data for said verification case to said SOC interface (*figure 4*); wherein said verification case checks for correctness of said outputted data from said verification interface model to said SOC interface by said second set of signals (*figure 4 and page 188, left-side column*) and records a verification case status; none of these references either alone or in combination with the prior art of record teaches a system and method for verifying integrated circuit logic of a system-on-a-chip (SOC), specifically including:

- a. Regarding claim 1, "a second EBIU connected to said first EBIU and to said verification interface model", "wherein said first set of signals received by said second EBIU is inputted to said verification interface model", in combination with the remaining features and elements of the claimed invention;
- b. Regarding claim 8, "a second EBIU connected to said first EBIU by a first external bus and to said verification interface model by a third internal bus", "wherein said first set of signals received by said second EBIU is inputted to said

verification interface model via said third internal bus", in combination with the remaining features and elements of the claimed invention;

c. Regarding claim 15, "a second EBIU connected to said first EBIU by a first external bus and to said verification interface model by a third internal bus", "wherein said second EBIU ~~and said first EBIU~~ are mastered by said master CPU of said SOC", in combination with the remaining features and elements of the claimed invention;

d. Regarding claim 21, "connecting said first EBIU to a second EBIU, which is external to said SOC, said second EBIU being connected to said external verification interface model", "inputting said first set of signals, received by said second EBIU, into said verification interface model", in combination with the remaining features and elements of the claimed invention.

7. It is for these reasons that the Applicant's claimed invention distinguishes over the prior art of record.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
